01

INTRODUCTION

A brief introduction about
Self-Checkout System

WHAT IS SELF-CHECKOUT SYSTEM?

- provide a mechanism for customers to complete their own transaction from a retailer without needing a traditional staffed checkout
- used mainly in supermarkets, department or convenience stores

CUSTOMER

- scan, bag, and pay for their products without the assistance of a cashier
- no longer need to wait in line to pay for their products especially for those who only want to buy a few things
- can use majority of payment methods, such as credit cards and E-Wallet, which can be completed in a matter of seconds using this technology

MANAGEMENT

- can reduce part of the store's cost of hiring cashiers
- save a sum of money to improve the shopping environment for customers in the store, and attract and retain more customers.

02

SYNOPSIS

AND

GENERAL IDEA

CUSTOMER

Print a receipt listing the list and quantity of all items purchased by the customer

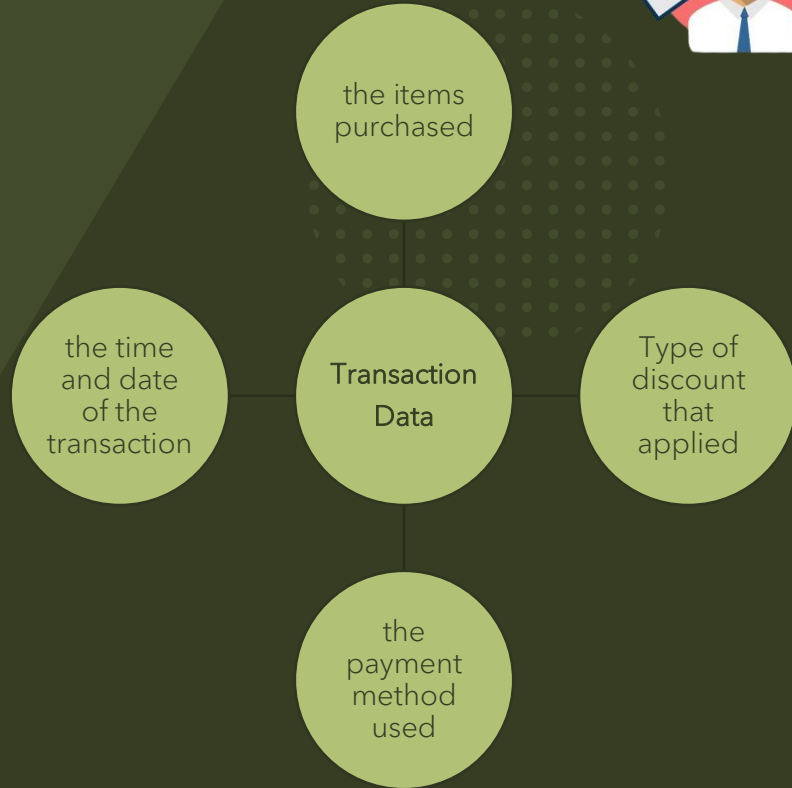

List the total price of all items and the tax paid

Display the customer's existing member points based on the entered member ID

Calculate the amount of discount if voucher code is applicable

MANAGEMENT

From the transaction data, the management can

- identify popular products
- purchasing trends, and peak shopping periods
- improve inventory management processes
- detect slow-moving items
- better estimate demand and modify inventory levels
- prevents overstocking or stockouts
