Lab Assignment 1: Daily Activities Recorder App

Lecturer: Dr. Seah Choon Sen

Student Name	Matric No.
Lam Yoke Yu	A23CS0233

Introduction

This report is about the Daily Activities Recorder App.

Objective

The objective of this application is to allow users to record their daily activities.

About the system

The system allows user to record basic information of daily activities, including fields such as activity name, time and category of activity.

In this implementation, the user can only add and delete activities.

Interface

Activity Input Field

This is a text field that allows user to enter the name of the activity. It allows the user to identify the task or activity recorded.

Time Input Field

This field allows the user to select the time of the activity using a time picker. It ensures the user can choose a valid time easily without typing manually.

Category Input Field

This field allows the user to assign a category to the activity, such as study, work or personal. It helps to organise activities into groups.

Add Activity Button

The "Add Activity" button is used to save the entered information. Once clicked, the activity is added to the activity list, and the input fields are all cleared.

Activity List

Activity List

Total Activities: 3

Study Flutter

 8:00 PM

 Study

Jogging

 6:00 PM

 Exercise

Breakfast

 7:00 AM

 Meal

This section displays all the added activities and its amount. Each activity card shows its name, time and category

Activity List

No activities added yet

If there are no activities, it will display “No activities added yet”.

Delete Button

Each activity card contains a delete button. When clicked, it removes the selected activity from the list after confirmation.

Overall Interface

The body of the application is constrained to a maximum width of 800px to prevent the layout from stretching across the entire screen when viewed on web platforms.

Conclusion

This is a simple application that applies basic Flutter concepts. It allows users to add and delete daily activities and displays the saved list in a structured format.
