

UTM
UNIVERSITI TEKNOLOGI MALAYSIA

PRE-CLASS ASSIGNMENT SESSION 20242025 SEM 02	
SUBJECT CODE	: GLRB0010
SUBJECT TITLE	: DESIGN THINKING FOR ENTREPRENEUR
SECTION	: 01
STUDENT'S NAME	: LAM YOKE YU
MATRIC NO.	: A23CS0233
PROGRAMME	: BACHELOR OF COMPUTER SCIENCE (DATA ENGINEERING) WITH HONOURS
LECTURER'S NAME	: ASSOCIATE PROFESSOR DR CORRIENNA ABDUL TALIB
DATE OF SUBMISSION	: 31 OCTOBER 2025

Task 1: 3-2-1 Reflection – Article Review

3 Key Takeaways

- Prototyping can be simple and affordable
- Think out of the box and consider ideas from people beyond the main target audience
- Products connect emotionally through design and practically through pricing

2 Way the Article Influenced my Expectation

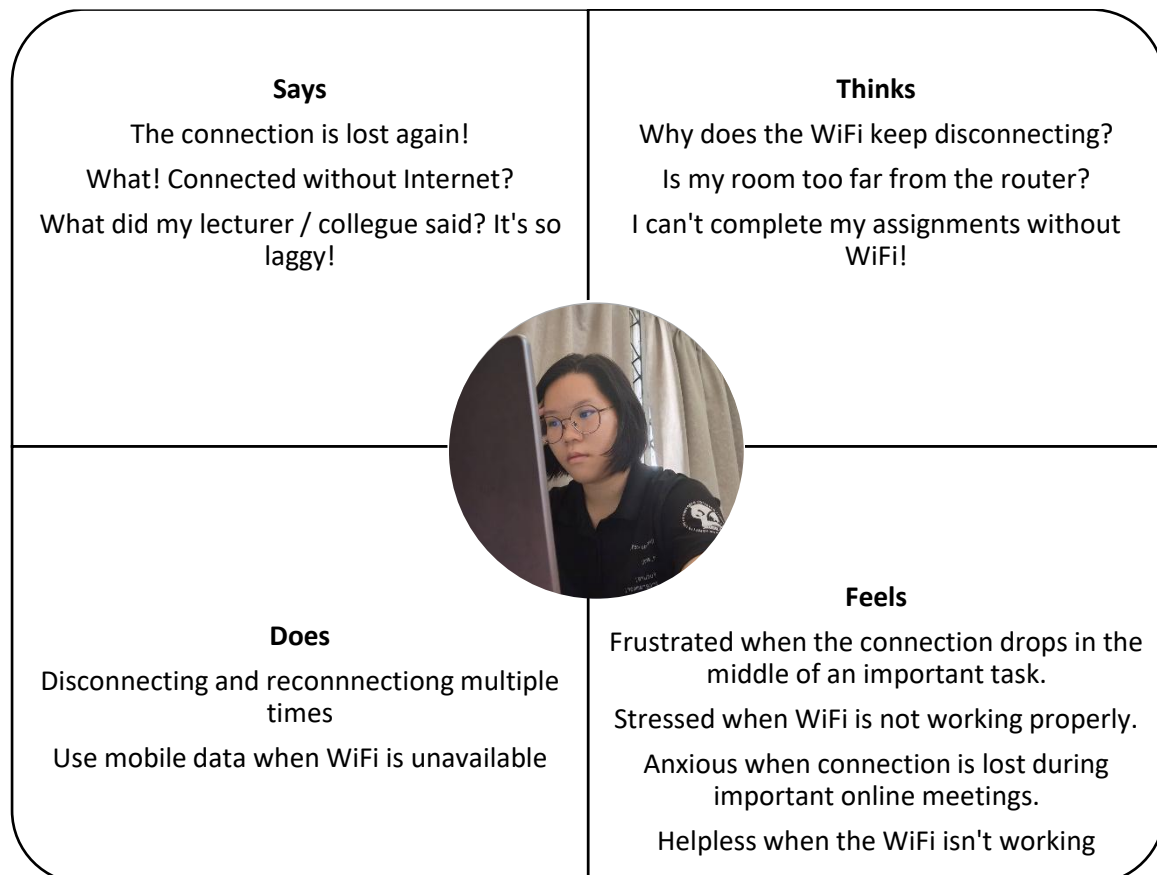

- The real-world examples made the concepts more relatable and practical
- Flowchart that outlines the design thinking process

1 Idea to Explore

- The Aravind example

Task 2: Empathy Mapping Challenge

A student using campus's Wi-Fi

Task 3: Case study analysis

Problem: Safety issue in Shopping Cart

Challenges faced:

- The team did not have expertise in all areas

How design thinking helped:

- The process of design thinking itself is helpful in addressing challenge
- They started by deeply exploring the shopping cart, by observing how it was made, used and repaired.
- Insights were shared among the team, leading to brainstorming and idea generation
- The ideas are sketched and mock-ups are built, and refined on feedback
- Finally, they would build a prototype considering the best element in each mock-up
- The iterative process allowed for refining and improving ideas.

Solution developed

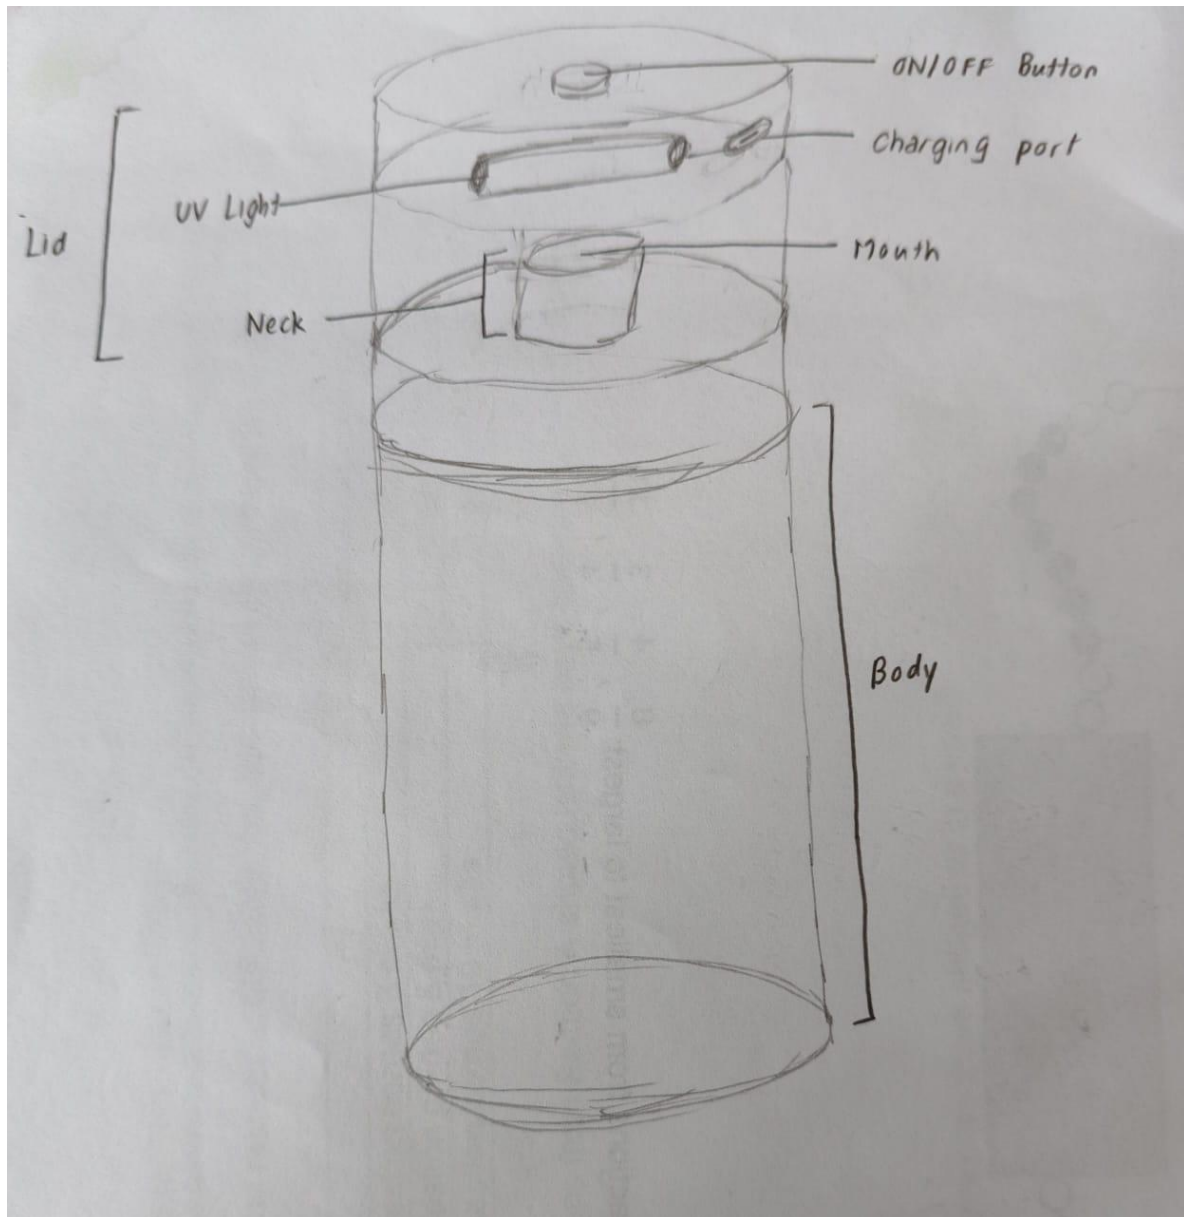

- A shopping cart the can slot in baskets and have hooks on the frame to hang bags. Besides, the cart's wheel can rotate 90 degrees, allowing better manoeuvrability in tight spaces.

Personal insights:

- Enlightened trial and error approach
- Time constraint is important to prevent endless process
- Teamwork is important
- Fail often to learn from the process.

Task 4: Reimagine Everyday Object

Self-cleaning Water Bottle

Problem:

Water bottle can develop bacteria and odours. Frequent cleaning is required. However, users always forget to clean them or lethargic to clean the bottle.

Value Added:

User can sterilise the water bottle without the need for soap and scrubbing. The UV light kills bacteria, germs, and other microorganisms in minutes! This can ensure cleaner water and more hygiene drinking.
