POLISI

PERSEKITARAN, KESELAMATAN DAN KESIHATAN PEKERJAAN

Universiti Teknologi Malaysia komited untuk mewujudkan dan melaksanakan Sistem Pengurusan Keselamatan dan Kesihatan Pekerjaan yang efektif untuk meningkatkan prestasi berterusan, meminimumkan hazard dan pencegahan kemalangan dan kecederaan di tempat kerja untuk semua aktiviti dalam operasi rutin dan bukan rutin.

KOMITMEN KAMI

- 1. PENCEGAHAN KEMALANGAN/INSIDEN, KECEDERAAN DAN PENCEMARAN**
 - Mewujudkan sistem proaktif yang dapat menyediakan tempat kerja yang selamat dan sihat untuk pencegahan kecederaan yang berkaitan dengan pekerjaan, dan kesihatan, mengurangkan hazard dan risiko kepada pekerja, pelajar dan orang awam.
 - Perlindungan alam sekitar termasuk pencegahan pencemaran dan pemuliharaan sumber.
- 2. PENAMBAHBAIKAN**
 - Meningkatkan keberkesanan sistem pengurusan keselamatan dan kesihatan secara berterusan dengan menetapkan kerangka objektif dan program keselamatan dan kesihatan serta persekitaran.
- 3. PEMATUHAN**
 - Komited untuk mematuhi semua undang-undang Keselamatan, Kesihatan Pekerjaan dan Alam Sekitar serta keperluan perundangan lain.
- 4. KOMUNIKASI**
 - Menyebarluaskan maklumat berkaitan keselamatan dan kesihatan kepada pekerja, pelajar, dan pihak berkepentingan yang lain.
 - Menyediakan mekanisme untuk perundingan dan keterlibatan pekerja dalam aspek keselamatan dan kesihatan pekerjaan.
- 5. BUDAYA KESELAMATAN**
 - Memupuk budaya kerja yang selamat sebagai amalan di Universiti Teknologi Malaysia dengan berpandukan pemahaman, tanggungjawab dan peraturan diri.
 - Menanamkan kesedaran keselamatan dan kesihatan pekerjaan di kalangan pekerja dan pelajar mengenai pentingnya menguruskan keselamatan dan kesihatan mereka.
 - Memberi latihan keselamatan kesihatan pekerjaan untuk meningkatkan kesedaran pekerja mengenai kesan dan risiko yang datang dari aktiviti, produk dan perkhidmatan di tempat kerja.

Polisi ini harus diedarkan dan disediakan untuk semua pekerja dan pihak yang berkepentingan serta akan disemak dari semasa ke semasa.

PROF. DR. MOHD SHAFRY BIN MOHD RAHIM
NAIB CANSOLOR
UNIVERSITI TEKNOLOGI MALAYSIA
Tarikh: 9 Jan 2025

No. Versi: 2/2025

POLICY

OCCUPATIONAL SAFETY, HEALTH AND ENVIRONMENT

Universiti Teknologi Malaysia is committed towards establishment and implementation of an effective Occupational Safety and Health Management System to continually improve our performances, minimization of hazards and prevention of accident and injuries in the premises for all our activities during routine and non-routine operation.

OUR COMMITMENT

- 1. PREVENTION OF ACCIDENT/INCIDENT, INJURIES AND POLLUTION**
 - Establish a proactive system which can provide safe and healthy working conditions for the prevention of work-related injury, ill health, eliminate hazards and reduce risks to our employees, students and the public.
 - Protection of the environment including prevention of pollution and conservation of resources.
- 2. IMPROVEMENT**
 - Continually improve the effectiveness of our safety and health management system through setting up the framework for occupational safety and health objectives and also establishing an environmental objectives and programs.
- 3. COMPLIANCE**
 - Commit to comply with all applicable Safety, Health and Environmental legislations and other legal requirements.
- 4. COMMUNICATION**
 - Communicate environment and also occupational safety and health issues to all our employees, students and other interested parties.
 - Provide mechanisms for consultation and participation of employees in occupational safety and health issues.
- 5. SAFETY CULTURE**
 - Nurture a safe working culture guided by understanding, responsibility and self regulation.
 - Inculcate safety and health awareness among our employees and students about the importance of managing their safety and health.
 - Provide occupational safety and health training in order to improve their awareness about the applicable impacts and risks from all activities.

This policy shall be distributed and made available to all employees, students and interested parties and shall be reviewed from time to time.

PROF. DR. MOHD SHAFRY BIN MOHD RAHIM
VICE - CHANCELLOR
UNIVERSITI TEKNOLOGI MALAYSIA

SHO Legal Framework & Regulations

- *The Act: OSHA 1994 (Act 514) - Section 29 requires the appointment of a competent SHO for specific industries.*
- *The Order: SHO Order 1997 - Specifies who must employ an SHO:*
 - *Building/Engineering construction > RM20 Million.*
 - *Manufacturing/Chemical industries > 100 employees.*
- *The Regulations: SHO Regulations 1997 - Outlines the duties (Advisory, Inspecting, Investigating) and registration requirements (The "Green Book").*

"Before we look at the specific hazards, it is important to understand the regulatory framework that governs the Safety and Health Officer career we are studying.

The role is mandated under Section 29 of OSHA 1994. However, not every company needs an SHO. Under the SHO Order 1997, high-risk industries like construction projects over RM20 million, or manufacturing plants with over 100 employees, represent the core job market for us.

Finally, the SHO Regulations 1997 dictate that an SHO must be 'competent'—which leads to the Green Book certification process my colleagues will detail in the Career Pathway timeline later."

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS				3. RISK CONTROL		
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
10	Damage to underground utilities (Non-routine)	Accidental striking of water/gas pipes	water/gas leak, pipe explosion	Underground utilities survey conducted before excavation	2	5	10	L1	Use hand-digging within 1m of marked utility lines Increase supervision during excavation	Harresh A.L. Uthayakumar A23C50116
11	Use of chemicals (Routine)	Chemical Leakage to water	Water Contamination	Store chemicals in designated, secure, bonded areas. Proper disposal of empty containers.	4	3	12	L2 - Environmental Quality Act 1974	Conduct monthly chemical storage inspection. Train personnel on spill response procedure.	Tan Yi Ya A23C50187
12	Working outdoors in hot/direct sun conditions (Routine)	Heat Stress / Heat Stroke / Sunburn	Dehydration, heat exhaustion, hospitalization, fatality	Implement a heat stress management plan. Ensure constant supply of cool drinking water.	4	3	12	L1	Schedule heavy physical work during cooler morning/late afternoon hours.	Tan Yi Ya A23C50187

Likelihood (A)	Severity (B)	Hierarchy of Control	Risk Level
5 - Most Likely (The most likely result of the hazard / event being realized)	5 - Catastrophic (Numerous fatalities, irrecoverable property damage and productivity)	1 - Elimination	1-4 (Low)
4 - Possible (Has a good chance of occurring and is not unusual)	4 - Fatal (Approximately one single fatality major property damage if hazard is realized)	2 - Substitution	5-12 (Medium)
3 - Conceivable (Might be occur at sometime in future)	3 - Serious (Non-fatal injury, permanent disability)	3 - Isolation	13-25 (High)
2 - Remote (Has not been known to occur after many years)	2 - Minor (Disabling but not permanent injury)	4 - Engineering Control	
1 - Inconceivable (Is practically impossible and has never occurred)	1 - Negligible (Minor abrasions, bruises, cuts, first aid type injury)	5 - Administration Control	
		6 - Personal Protective Equipment (PPE)	
Legal & Other Requirements			
L1 - Occupational Safety and Health Act 1994 (Act 514)			
L2 - Factories and Machinery Act 1967 (Act 139)			

Working on mobile cranes and lifting operations(Routine)

High Risk 1

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (D Date / Status)
1	Working on mobile cranes and lifting operations(Routine)	Crane collapse due to mechanical failure	Multiple fatalities,Permanent disability,Serious damage to property	Daily crane inspection by operator, Load chart displayed	5	5	25	L1 & L2	Stop work during high wind speeds and poor weather	Abdulrahman Rashad A19EC4001

High Risk 2 Working at height (Routine)

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
2	Working at Heights (Routine)	Falling objects from upper levels	Workers below are exposed to head injuries	Barricades and warning signages placed around lifting and overhead work area	5	4	20	L1 & L2	Use fall protection nets where necessary	Tan Ai Ni A21SC0385

High Risk 3 Ground Excavation, Piling, or Digging (Non-Routine)

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
3	Ground Excavation, Piling, or Boring (Non-Routine)	Accidental penetration/rupture of a high-pressure natural gas pipeline.	Massive explosion and fire, toxic gas release into the environment, , and massive legal/environmental fines.	Obtain permits to excavate (PTW) and utility maps/plans. Mark utility lines with surface paint/flags.	3	3	15	L1, L2, L5, L7	Mandate use of non-invasive detection methods within 1.5m of marked lines. Evacuate the area immediately upon finding any utility not on the map.	Fadzlee Adam A24A10027

Risk 4

Setting/Dismantling the scaffolding (Non-Routine)

- No certified scaffold materials
- No guardrail
- No Harness
- Unstable structure
- unsecured platform

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
4	Setting/Dismantling the scaffolding (Non - routine)	Unstable scaffold components	Collapse of scaffold structure, Broken bones, and possibly death	Scaffold components inspected before use	3	4	12	L1 & L2	Replace damaged/old components immediately, full-body harness(PPE)	Raqib Hazim A24AI0118

Risk 5

Using handheld power tools (Routine)

Hazard:

Rotating blades, disc shattering, kickback, electrical faults

Potential consequences:

- Finger/hand amputation
- Eye and facial injuries from flying fragments
- Burn from sparks
- Disc explosion striking neck or throat

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
5	Using handheld power tools (Routine)	High speed disk failure (rotating blade)	Severe cut, eye injuries, imputation	Tools checked visually before use	3	4	12	L1	Install full guards, use certified discs, mantain tools regularly	Muhammad Lukman A24AI0061

Risk 6

Operation of heavy machinery (ROUTINE)-Prolonged noise exposure

Effect:

- Noise-induced hearing loss
- Headache
- Tinnitus
- Permanent hearing damage

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
6	Operation of heavy machinery (Routine)	Prolonged noise exposure	Noise-induced hearing loss, headache, tinnitus, permanent hearing damage	Use earplug or earmuff to protect ear and worker rotation to reduce exposure time	4	3	12	L1	Install noise barriers or sound-absorbing panels and enforce mandatory ear protection use	LIM KAI ROU A21SC0132

Risk 7 Performing operations on concrete, stone and tiles (Routine)

Hazard:

Inhalation of Crystalline Silica Dust.

Consequence:

High risk of severe, long-term health issues, including Silicosis, Lung Cancer, and COPD.

Control Measures:

Use water suppression cutting method; Workers provided with fit-tested P3 respirators.

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
7	Performing operations on concrete, stone and tiles (Non-Routine)	Inhalation of hazardous dust	Silicosis, Lung Cancer, Chronic Obstructive Pulmonary Disease (COPD)	Use water suppression cutting method; Workers provided with fit-tested P3 respirators.	2	5	10	L1	Medical surveillance for workers exposed to silica; Isolate cutting area from main work zone.	Tan Yi Ya A23CS0187

Risk 8

Harmful chemical components from Paints and coatings (Routine)

Activity: Painting and coating wall or substance

Heavy metal contains in paint and coating material

- Lead
- Chromium
- Cadmium
- Mercury

Health hazard towards workers

- Cause eye, nose, and throat irritation
- headaches, dizziness, and nausea
- Trigger asthma or breathing difficulties
- liver, kidney, or nervous system damage

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
8	Paints and coatings(Routine)	Harmful chemical substances	respiratory irritation, eye, nose and throat irritation, headaches, dizziness and nausea	Proper Ventilation, by using natural and mechanical ventilation. Use of PPE such as respirators and masks to protect from toxic fumes. Wear glove and safety goggles and face shields	3	4	12	L1 & L4	Install local exhaust ventilation near painting areas to capture fumes at the source. Schedule painting tasks during low-occupancy periods to minimize worker exposure.	TENG CHU WANG A2JKM0269

—
Risk 9
Electrical
Hazard
(routine)

Activity: using faulty cables, exposed wires, or working near live electrical panels

Hazard: Electrocution or electrical fires

Consequence: Severe burns, shock injuries, or death

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
9	Working near live electrical panel (Routine)	Electrocution or electrical fires	Severe burns or shock injuries	Regular inspection of cables and electrical tools	3	4	12	L1, L2 & L5	Use double-insulated tools, Provide electrical hazard training to workers	Harresh A/L Uthayakumar A23C80226

Risk 10

Damage to underground utilities(Non-routine)

Activity: Excavation, drilling, piling, or trenching without proper utility surveying and marking.

Hazard: Accidental striking of underground utility lines such as water pipes, gas pipelines, electrical cables, or communication lines.

Consequence: Service interruption to the community, environmental contamination (gas or water leakage), electrical fires, explosion.

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
10	Damage to underground utilities(Non-routine)	Accidental striking of water/gas pipes	water/gas leak, pipe explosion	Underground utilities survey conducted before excavation	2	5	10	L1	Use hand-digging within 1m of marked utility lines Increase supervision during excavation	Harresh A/L Uthayakumar A23CS0226

Hazard:
Chemical Spill or Leak (contaminating soil and water bodies).

Consequence:
Water and soil contamination, leading to significant clean-up costs and legal fines.

Control Measures:
Store chemicals in designated, secure, bunded areas; Proper disposal of empty containers.

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS					3. RISK CONTROL	
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
11	Use of chemicals (Routine)	Chemical Leakage to water	Water Contamination	Store chemicals in designated, secure, bunded areas; Proper disposal of empty containers.	4	3	12	L7 - Environmental Quality Act 1974	Conduct monthly chemical storage inspection; Train personnel on spill response procedure.	Tan Yi Ya A23CS0187

Risk 12 Working outdoors in hot/direct sun conditions (Routine)

Hazard:

Heat Stress / Heat Stroke and severe dehydration.

Consequence:

Dehydration, heat exhaustion, and potential fatality from heat stroke.

Control Measure:

Implement a heat stress management plan

1. HAZARD IDENTIFICATION				2. RISK ANALYSIS				3. RISK CONTROL		
No.	Activities (Routine / Non-Routine)	Actual and Potential Hazards	Which can Cause Potential Consequences / Risk Effects	Existing Control Measures	Likelihood (A)	Severity (B)	Risk Level (A) x (B)	Legal & Other Requirements	Additional / Recommended Control Measures	Person In Charge (Due Date / Status)
12	Working outdoors in hot/direct sun conditions (Routine)	Heat Stress / Heat Stroke / Sunburn	Dehydration, heat exhaustion, hospitalization, fatality	Implement a heat stress management plan; Ensure constant supply of cool drinking water.	4	3	12	L1	Schedule heavy physical work during cooler morning/late afternoon hours.	Tan Yi Ya A23CS0187
